Platform : AWS Cloud | Python Language - Basic knowledge | Database Technologies (My SQL, DynamoDB, PostgreSQL) | Web Technologies Fundamentals - HTML, CSS

ADDITIONAL INFORMATION

PROJECTS

Server-less Web Application - WildRydes Successfully deployed and cleaned up a server-less web application which allowed users to book unicorns for ride, using **AWS Lambda, CloudWatch, API Gateway, DynamoDB, AWS Amplify** and **Cognito** for user registration and management.

CURRENT
On-Demand Campus Shuttle Service Currently working on a final year project which provides an online ride booking service, targeted towards students. The individual task was to **implement the backend and deploy the website**. The project will result in a web application which helps students to book, pay and provide feedback for e-rickshaw, or any other shuttle service.

2-D Space Shooter Working on a 2-D space shooter game which resembles Astro Blaster. Both **frontend and backend was developed** with features like sound effects, background music and score system, with more features to be implemented.
